About Me

- Software Engineer passionate about AI and AI-powered products, with a strong interest in developer tools, data platforms, and cloud-native systems. Fast learner who adapts quickly to new technologies and works across Java, Python, React, Spring Boot, microservices, Kubernetes, OCI, and cloud platforms. Enjoys turning complex requirements into reliable full-stack solutions and contributing effectively in collaborative, fast-paced teams.

Education

ENSAH - École Nationale des Sciences Appliquées d'Al Hoceima, Software Engineering Degree – Al Hoceima 2021-09 – 2026-07

Experience

Full-Stack Developer Intern, Oracle – AIDP AgentHub Development 2026-04 – 2026-09

- Developed experience in Java and Python full-stack development, microservice-based platforms, Kubernetes, OCI, MLOps, and deployment across multiple environments.
- Worked within enterprise engineering workflows covering security, governance, secure data access, and platform service operations.

Full-Stack Developer Intern, Marketing Confort – Fès, Morocco 2025-07 – 2025-09

- Built proficiency in Spring Boot microservices, Next.js web development, React Native mobile development, and Keycloak role-based access control.
- Strengthened end-to-end delivery skills across backend APIs, web and mobile interfaces, and multi-agency business workflows.

Projects

Oracle AI Data Platform (AIDP) - AgentHub and Notebook Service

- Developed and extended Java/Python features for Agent Studio and the Notebook Service, supporting pro-code and no-code AI agent development.
- Built an AI assistant service for notebook-level automation using FastAPI and Server-Sent Events (SSE), streaming agent progress and results to the UI.
- Implemented a DeepAgent-based runtime to generate, validate, and save Jupyter notebooks; manage notebook operations; create workflows; and provision compute clusters.
- Integrated catalog, workspace, workflow, volume, and cluster services, adding skill-guided generation, token tracking, validation guardrails, and structured UI-ready responses.
- Built a Streamlit framework to evaluate LLM code assistance (code quality, execution time, token usage), supporting tests across various LLMs and prompt versioning.
- Delivered the service end-to-end with unit and integration tests and Kubernetes deployment.

Multi-Agency Car Rental Management Platform

- Built a Next.js web platform and an Expo React Native mobile app utilizing Zustand for state management for agencies, reservations, fleet operations, and customer interactions.
- Designed a Spring Boot microservices backend and integrated Keycloak authentication with role-based access control.
- Improved multi-agency operational workflows through centralized management across web and mobile experiences.

NLP Data Annotation Platform

- Built a React and Spring Boot platform with JWT authentication for real-time NLP dataset annotation, task distribution, and statistics.
- Implemented management features for annotators, tasks, and datasets to support distributed annotation workflows.

E-Commerce - Microservices

- Implemented Spring Boot and Kafka microservices with an API Gateway, Eureka service discovery, and Zipkin tracing.
- Used Kafka for asynchronous communication and integrated Amazon S3 for object storage.

AI Chatbot with RAG

- Developed a Next.js RAG chatbot that explains complex medical reports in plain language.
- Used MongoDB for concurrent conversation histories and Astra DataStax vector storage for context-aware answers from uploaded documents.

Skills

- **Languages and Frameworks:** Java, Python, FastAPI, JavaScript, C, C++, React, Next.js, React Native, Spring Boot, Laravel, Node.js
- **Databases:** MySQL, SQL Server, Oracle, MongoDB, Astra DataStax
- **DevOps and Cloud:** Docker, Kubernetes, Jenkins, OCI, AWS (EC2, S3), CI/CD, Git/GitHub
- **Modeling and Design:** Merise, UML
- **Languages:** Arabic, English, French
- **Soft Skills:** Communication, teamwork, adaptability, problem-solving, fast learning
